

App Store Approval

# 1 Contents

2 This page will eventually collect all the guidelines we recommend for app-store  
3 curators.

4 The general principle should be that anything that crosses a trust boundary  
5 should be checked.

6 For now, here are the design documents and wiki pages that are relevant to this  
7 topic. This list is not exhaustive:

- 8 • [Applications design document](#)<sup>1</sup>
- 9 • [Multi-user design document](#)<sup>2</sup>
- 10 • [Security design document](#)<sup>3</sup>
- 11 • [Sensors and Actuators design document](#)<sup>4</sup>
- 12 • [Geolocation and Navigation design document](#)<sup>5</sup>
- 13 • [Application Layout](#)<sup>6</sup> (the layout, bus names, etc. are constrained, and  
14 various system integration points should be checked)
- 15 • [Content hand-over](#)<sup>7</sup> (documents cross the boundary between bundles)
- 16 • [Interface discovery](#)<sup>8</sup> (the interfaces that can be advertised are constrained)
